

BEEERPAPER

Ethereum network

Launch August 12th 2021

Introduction

Sit down and have a drink. Welcome to Beer Inu (\$BEEER). Make yourself feel at home. I'm going to tell you what \$BEEER is all about.

Look out the window. What do you see? People racing to their work, taking things too seriously, and dumping their coins on the heads of more relaxed holders.

Have a \$BEEER. Here at \$BEEER we have a more relaxed look at life. We are like, we want to enjoy crypto and make gains, but also want to enjoy life.

You think that's impossible? It isn't, mate. Get yourself some \$BEEER. \$BEEER has the following tokenomics so you can relax:

- \$BEEER holders receive 12-22% reflection in Ethereum;
- \$BEEER holders are protected by the FTP Antibot system;
- \$BEEER holders who sell within a month pay the 10-20% hangover tax.

That's right. By drinking, I mean holding \$BEEER, you get a share in the big Ethereum pie. Every transaction, whether someone buys or sells \$BEEER, you get 12% Ethereum reflection. So you can buy more \$BEEER the more you enjoy!

The reflection system was designed by the renowned developers of the Fairtoken Projekt.

To retrieve the Ethereum reflection on your \$BEEER, simply:

- Go to: app.fairtokenprojekt.com or click the "Collect ETH" button on beer-inu.com;
 - Connect your wallet;
 - Retrieve your Ethereum gains!

You don't want bots to get ahold of your \$BEEER. The system runs buyers and sellers through the system realtime to determine whether they are bots or honest traders. Eventual bots are blacklisted as the contract is used in realtime.

The aim of the \$BEEER team is to build a community of relaxed holders who do not have to stress every time someone is selling their \$BEEER.

\$BEEER tokenomics summary

For a more serious summary of our tokenomics see here:

- Available on Uniswap
- 12% Ethereum reflection
- 3% development/beer tax
 - 10% Hangover tax
 - FTP Antibot System
 - Wallet hardcap 1%
- 7.5 ETH liquidity pool

On the next page we will discuss some of these tokenomics (beeronomics?)

Hangover tax the first month after buying \$BEEER

Some people who buy \$BEEER don't know what to do with it. They click Swap on Uniswap but in the wrong direction! You of course want to hold your \$BEEER, not swap it for Ethereum when you should be enjoying your \$BEEER.

People who don't hold their \$BEEER can be annoying to people who are simply enjoying their \$BEEER. That's why if you can't hold your \$BEEER for even one day, you suffer the hangover tax. Every sell within the first month of buying \$BEEER, suffers an extra 10-20% tax. This 10-20% tax is redistributed between the \$BEEER holders and the \$BEEER team.

Beer tax

Every transaction, 3% goes to FTP and the \$BEEER team so they have funds for further development and marketing of the coin. Marketing is important as no one enjoys holding their \$BEEER alone. The ultimate goal of the \$BEEER team is to establish a community beer brand.

Locked liquidity

\$BEEER is best kept in cold storage. That is why we are locking the liquidity for two months. The liquidity will be locked on Unicrypt.

\$BEER ROADMAP

PHASE I

- Community start
- Website launch
 - Whitepaper
- Contract deployment
- Uniswap listing

PHASE II

- Coingecko listing
- CoinmarketCap listing
- Community contests
 - CEX listing(s)
- Beer INU NFT's

PHASE III

- Beer INU parties
- Beer INU beer brand
 - DAO system
- And more that fits the brand
- The next roadmap

The \$BEEER team wants to give the community a voice in deciding the direction of the project. We will do polls and in the future, utilise a DAO system to decide on the direction of the project.

We hope to see you on the blockchain! Cheers!
